Order from LC or SLA mi$1.80, ph$1.80 61-13323

Trans. of Zhurnal Fizicheskoy Khimii (USSR) 1957, v. 31, no. 2, p. 481-484.

An analysis of the previously derived equations for the equilibrium curves of binary systems in approximation to regular solutions, is made for a number of particular cases. It is shown that the shape of the equilibrium curves is determined by the magnitude and the ratio of the mixing in the co-existing phases. The phase diagram of the system Au-Pt is calculated and it is shown that a slight increase in the mixing energy in this system changes the diagram from the monotonic type for amutual solubility in all proportions in liquid and solid states to one of the peritectic type.
